

Natural Gas | Custom Product Structures

Competitive Prices. Exceptional Customer Service.

With competitive pricing and an unrivaled commitment to customer service, ENGIE Resources offers a range of custom natural gas product structures to both transport and utility choice program commercial and industrial customers. Leverage our cross-commodity expertise as gas and power continue to grow in interdependence, and talk to our energy experts today about the right plan for your business.

Customize the Right Solution for Your Business

All products tailored with or without pass-through of transportation charges.

Fixed

The predictability of a set unit price

Index

Unit price tied to a published market index that can fluctuate

Variable

Unit price can fluctuate but is not tied to a published market index

Hybrid

Combination of fixed, index and variable rates tailored to risk tolerance and business drivers

Product Availability

Firm and interruptible delivery options are available in a number of competitive markets. Monthly and daily balancing options are also offered, depending on the utility. Single utility consolidated billing is available as well as dual billing where required in certain markets and for customers who meet daily volume requirements.

Bandwidth is 25% standard for firm pricing and 10% for interruptible pricing.

Simplify Your Supply Chain with Commodity Aggregation

As natural gas and electricity supply has become more commoditized, a limit has emerged in the hard-dollar savings that can be realized through competitive pricing alone. However, commodity aggregation or supplier consolidation could offer a path to deliver further economic value—while simplifying your supply chain.

Reduced Purchased Costs

Buying power increases when the number of suppliers is reduced—and so does the supplier’s ability to become a strategic partner on critical business initiatives, including sustainability, risk mitigation, localization, and innovation.

Reduced Procurement and Supplier Management Costs

Fewer suppliers mean lower interaction costs. A recent independent, third-party study* supports that statement, demonstrating increased ease in automating interactions. This frees up staff and generally results in a total steady-state cost for purchase that is 64% lower than organizations with several suppliers.

Reduced Noncompliance

The study* also illustrated that companies can yield 1% to 2% savings in spend when they engage with and actively manage fewer suppliers who have capable processes and systems. It also simplifies the complexities of monitoring regulatory requirements.

**The Hackett Group*

ENGIE Resources acquired Plymouth Rock Energy in 2018. The transaction received approval from the Federal Energy Regulatory Commission and became effective December 19, 2018. Plymouth Rock Energy is currently operating as “Plymouth Rock Energy, an ENGIE company.”
