ENGIE to Supply Planet-Friendly Power to AstraZeneca Texas Manufacturing Site

HOUSTON – ENGIE Resources (ENGIE), a subsidiary of ENGIE North America, announced today a nine-year renewable energy supply agreement with AstraZeneca. Under the terms of an agreement that runs through 2034, AstraZeneca will procure renewable solar energy and Renewable Energy Credits (RECs) through ENGIE to support its manufacturing operations in Coppel, Texas.

The retail supply agreement will source from the Tyson Nick Solar Project, a 114MW solar generator that is located 90 miles northeast of Dallas in Lamar County, Texas. This agreement represents a major step toward reducing environmental impact, avoiding an estimated 94,447 metric tons of carbon dioxide emissions, the equivalent of eliminating the emissions from burning 105 million pounds of coal. This initiative underscores AstraZeneca's strong commitment to sustainability and responsible environmental stewardship.

"This joint effort with AstraZeneca exemplifies how leading organizations can align climate ambition with meaningful action," said Anne-Laure Chassanite, CEO of ENGIE Resources. "We're proud to deliver renewable energy in support of AstraZeneca's decarbonization goals—and deeply grateful to the dedicated teams across both organizations whose expertise and collaboration made this agreement possible."

"By securing renewable energy for our Texas operations, AstraZeneca is proud to lead by example in reducing emissions and building a resilient supply chain," said Jim Fox, Senior Vice President, Americas Supply Operations at AstraZeneca. "This partnership illustrates how innovative thinking, shared values, and action can accelerate the transition to cleaner energy, benefitting both our business and our communities."

AstraZeneca represents a strategic customer base for ENGIE. It is one of nineteen global pharmaceutical accounts and is one of the first to have its climate targets verified by the Science-Based Targets Initiative's Net-Zero Corporate Standard.

"We are privileged to work with an organization so deeply committed to both human health and environmental sustainability," said Kristine Robak, Key Account Director at ENGIE Resources. "By delivering the benefits of renewable energy, we're proud to contribute to AstraZeneca's ambitious growth and sustainability goals as they expand their manufacturing capacity in the U.S."

**About ENGIE North America**

Based in Houston, Texas, ENGIE North America Inc. is a regional hub of ENGIE, a global leader in low-carbon energy and services. ENGIE (ENGI), is listed on the Paris and Brussels Stock Exchanges. Together with our 97,000 employees around the globe, our customers, partners and stakeholders, we are committed to accelerate the transition toward a carbon-neutral world, through reduced energy consumption and more environmentally friendly solutions. Inspired by our purpose (“raison d’être”), we reconcile economic performance with a positive impact on people and the planet, building on our key businesses (gas, renewable energy, services) to offer competitive solutions to our customers. In North America, ENGIE helps our clients achieve their energy efficiency, reliability, and ultimately, their sustainability goals, as we work together to shape a sustainable future. We accomplish this through: energy efficiency projects, providing energy supply (including renewables and natural gas), and the development, construction and operation of renewable energy assets (wind, solar, storage and more).
