

ENVIRONMENTAL INFORMATION FOR ELECTRICITY SERVICES Provided by ENGIE RESOURCES LLC

The following environmental information is for electricity supplied through ENGIE Resources LLC
from January 1, 2025 through June 30, 2025

Power plants can generate electricity from a number of different fuel sources, resulting in different emissions. ENGIE Resources LLC will report fuel sources and emissions data to customers twice annually, allowing customers to compare data among the companies providing electricity service in Maryland.

In this report, the standardized environmental data below is the PJM *regional averages only* of most power plants in the Mid-Atlantic region. It is information collected from the PJM System Mix for fuel mix data and average emissions data.

ENERGY SOURCE (System Mix)

The values shown represent 2025 averages
for the Mid-Atlantic region (PJM).

AIR EMISSIONS

The amount of air pollution associated with the
generation of the electricity production for this region is
shown in the table at right.

Pounds Emitted per Megawatt Hour of
Electricity Generated

Sulfur Dioxide (SO ₂)	0.3606
Nitrogen Oxides (NO _x)	0.2836
Carbon Dioxide (CO ₂)	755.6807

CO₂ is a "greenhouse gas," which may contribute to global climate change. SO₂ and NO_x released into the atmosphere react to form acid rain. NO_x also reacts to form ground level ozone, an unhealthful component of "smog".
